

Wiring to Third-Party Relays, Contactors & Electrical Panels

Agrowtek does not recommend connecting third party relays directly to the controller's output terminals. Use Agrowtek's "RD series" dry contact relays to interface the GrowControl system to custom relays, contactors, etc.

WARNING

This system operates only on regulated 24vdc with Agrowtek's 24vdc relays and components. **Do not connect ANY power to the controller's inputs or outputs.**

Connection to Electrical Relay / Contactor Panel

Always ensure relays / contactors are rated for the voltage and current applied.
