

## SIMPLE & EASY CLIMATE CONTROL

MCX8 "mini" control system combines Agrowtek's SXE environment sensor and intelligent RD8i dry-contact relay to form a basic climate control system.

**Sensor Control** Each relay contact can be independently programmed to respond to temperature, humidity or CO2 (if equipped) with adjustable deadband and set-points for day and night (determined by the built-in light sensor.)

**Timer Control** Each relay contact may also be configured with a cycle timer and 24-hour timer control. Precision RTC and battery backup maintain accurate time & date.

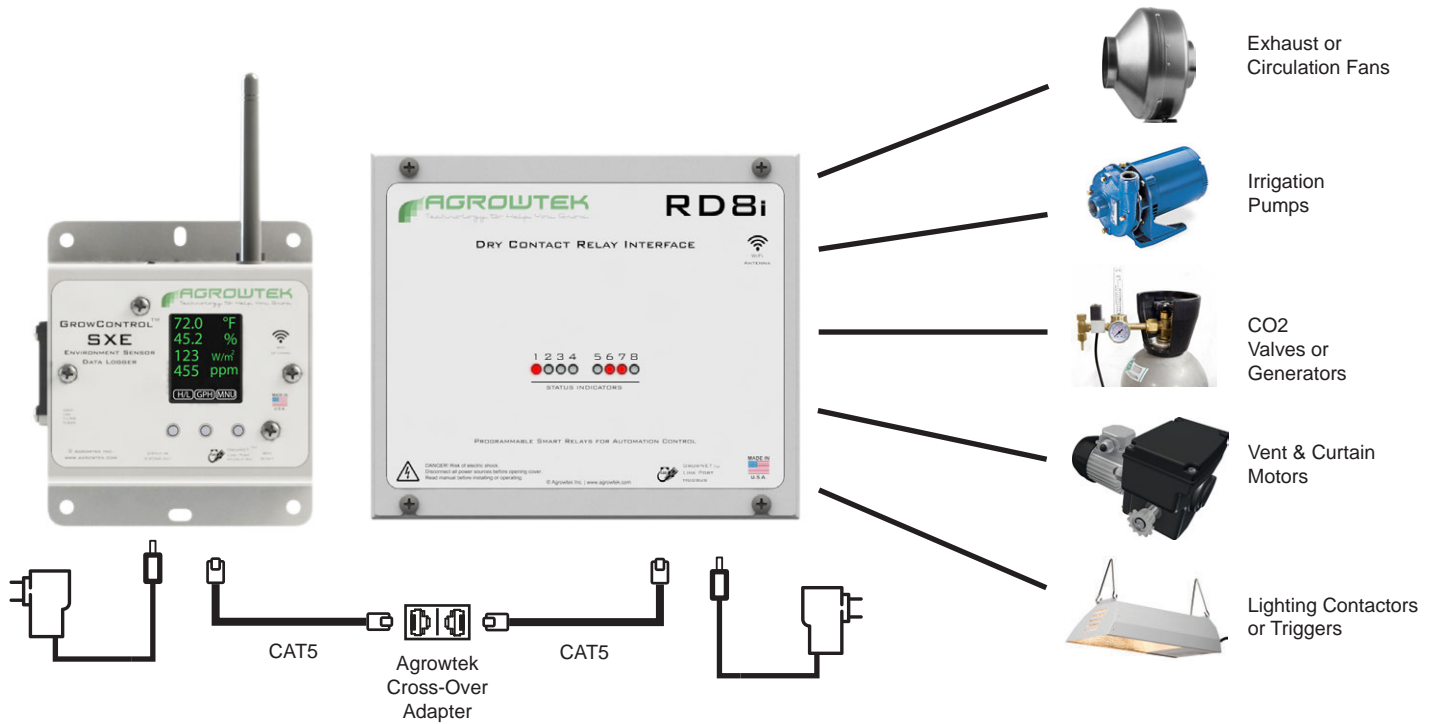

SXE's LCD display allows advanced configuration of the relay control parameters as well as graphing, alarms, data logging and more. Optional WiFi module allows connection to a phone or web-portal connection for remote monitoring.

### Controls

-  Temperature Heat/Cool
-  Humidity Hum/Dehum
-  Carbon Dioxide Inject/Exhaust
-  24-Hour Timers Cycle Timers

### Typical Installation

### Ordering Options

- MCX8 - C W
- WX-C WiFi Upgrade Kit
  - None: Temperature, Humidity, Light only
  - C: SX-CO2 ppm (NDIR) Sensor Upgrade
  - 4: RX4i Relay
  - 8: RD8i Relay

### Optional Accessories
