

Simple & Easy Climate Control

The MCX4 “mini” control system combines Agrowtek’s SXE aspired environment sensor and controller with an intelligent RX4i relay to form a basic, quad-outlet climate control system. Quick and easy setup; uses standard RJ-45 Ethernet cabling to connect the controller & relay.

Sensor Control The outlet can be programmed to respond to temperature, humidity or CO2 (if equipped) with adjustable deadband and set-points for day and night (determined by the built-in light sensor.)

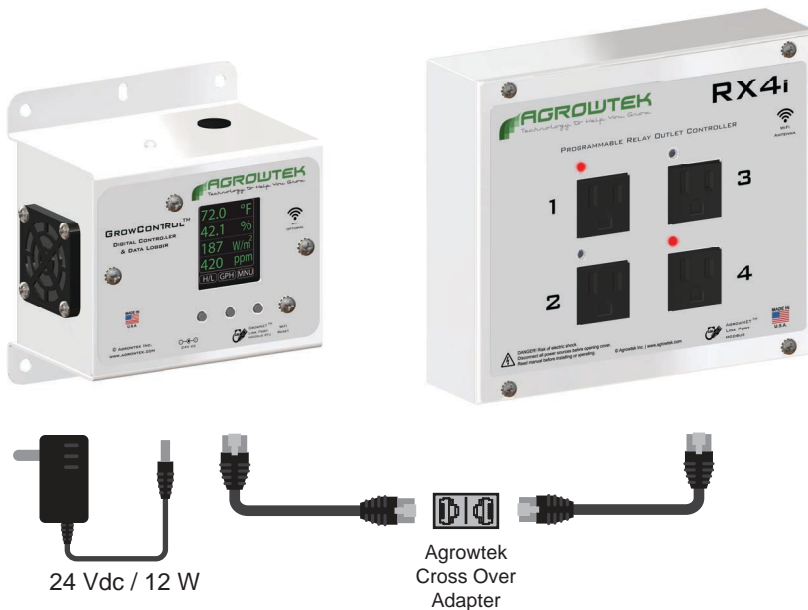

Timer Control Each outlet may also be configured with a cycle timer and 24-hour timer control. Precision RTC and battery backup maintain accurate time & date.

LCD Display Allows quick configuration of the relay control parameters, graphing, alarms, data logging and more.

Available with 120V power cord or conduit installation without cord.

Typical Installation

Controls

-  Temperature
Heat/Cool
-  Humidity
Humidify/Dehumidify
-  Carbon Dioxide
Inject/Exhaust
-  24-Hour Timers
Cycle Timers

Ordering Options

- MCX4 - C W**
- WX WiFi Upgrade
 - None: Temperature, Humidity, Light only
 - C: SX-CO2 ppm (NDIR) Sensor Upgrade
 - 1: RX1i Relay
 - 4: RX4i Relay
 - 8: RD8i Relay

Optional Accessories

LX1
 USB AgrowLINK
 GrowNET Bridge
