

Rugged | Economical | Smart Design

Electric solenoid actuated water valve for irrigation and fertigation equipment, liquid level controllers and more.

Intelligent design with self-cleaning ports and diaphragm for resistance to sediment, and fail-safe mechanism preventing failure in the open position. Zero stress diaphragm design to prevent stretching, a common failure mode. Molded shock-cone for anti-water hammer. Manual bleed/open lever. High strength glass-filled nylon body with stainless steel hardware.

Operates on 15Vdc for Agrowtek VX8i valve controllers and or VXP8 valve panels, or 24Vac for standard irrigation applications.

Max Pressure:
150 psi

Stainless Steel
Solenoid Actuator

Self-Cleaning
Resistant to Sediment

Made in
USA

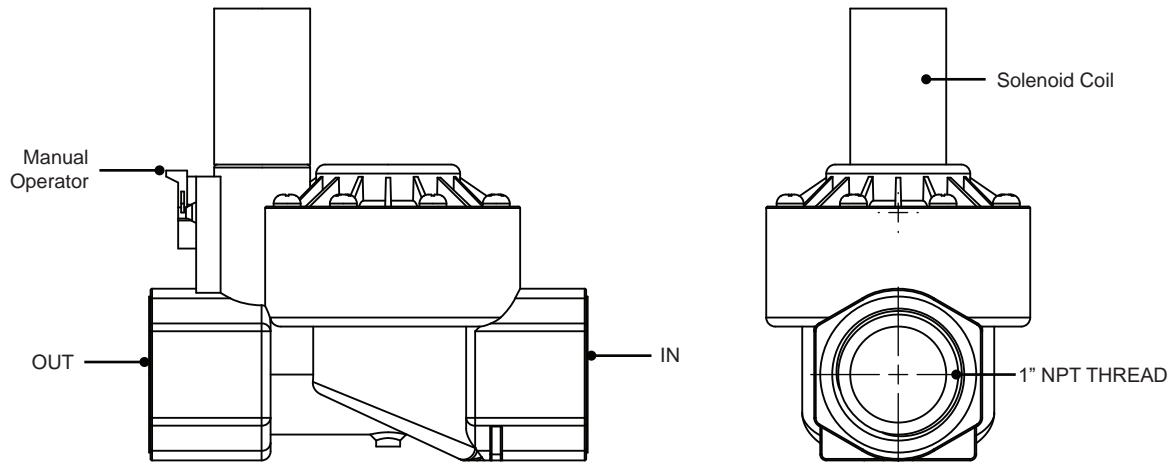

Applications

- Automatic Fill/Drain Level Control
- Water & Nutrient Tanks
- Recirculating Hydroponic Systems
- Aquarium/Aquaponics
- Irrigation Systems

Specifications

Voltage Input:	15 Vdc / 24 Vac
Current Consumption:	20 mA
Connection Thread:	1" NPT Female
Max Flow Rate:	0.25 - 35 gpm
Max Pressure:	4 - 150 psi
Reverse Flow:	No Protection

Features

Ordering Options

VX1
└─ 1: 1" NPT

Includes 8" lead length for solenoid.

Note: Actual features appearance may vary.
