## Configuring Gmail for App Access

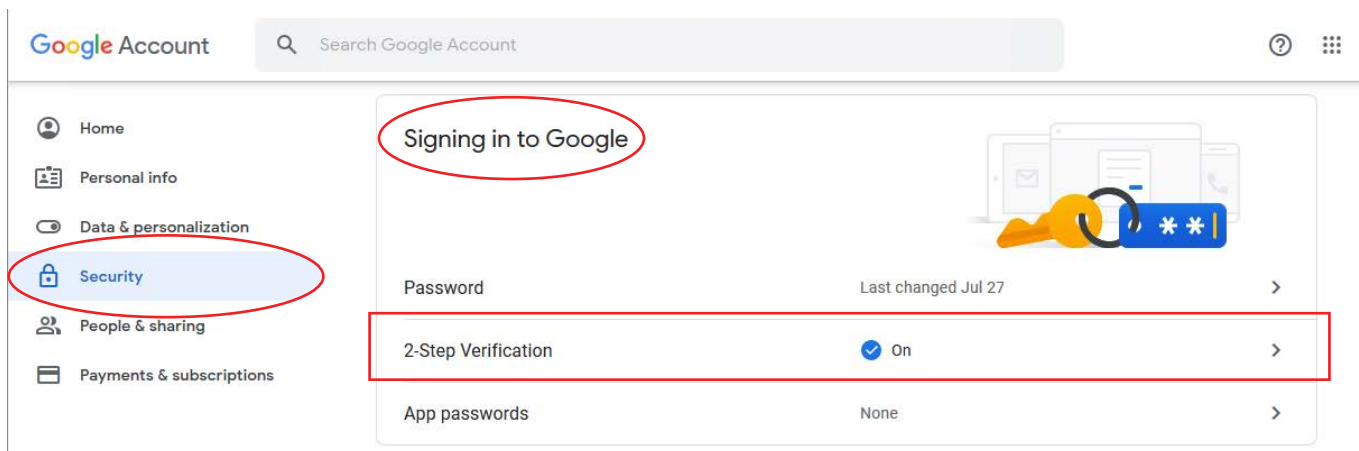

Gmail requires an “app password” to be generated to allow applications to use the account.

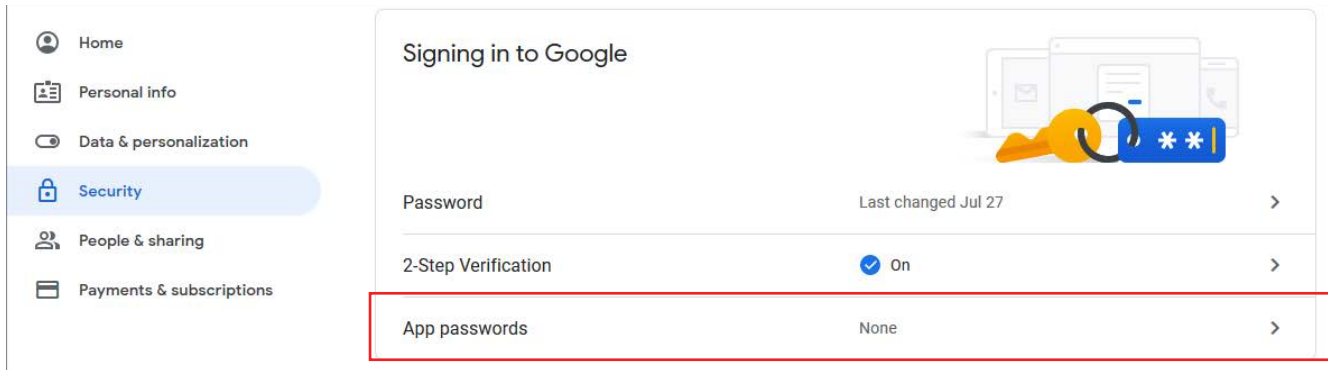

To generate app passwords, the account must have two-factor authentication enabled.

1. Log into your google account (manage your account) and select “security.”
2. Locate the “Signing in to Google” panel and click “2-Step Verification”.

*Follow the prompts to turn on 2-step verification.*

3. An app password may now be created; click "App passwords".

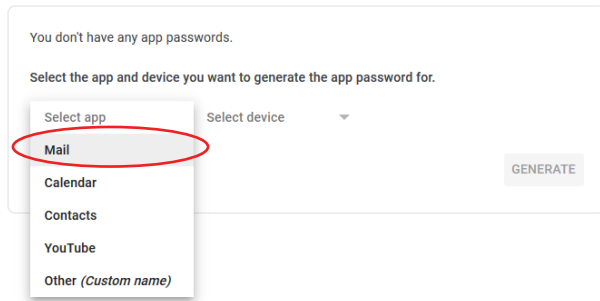

4. From the "Select app" drop-down, choose "Mail."

5. From the "Select device" drop-down, choose "Other (custom name)."

### ← App passwords

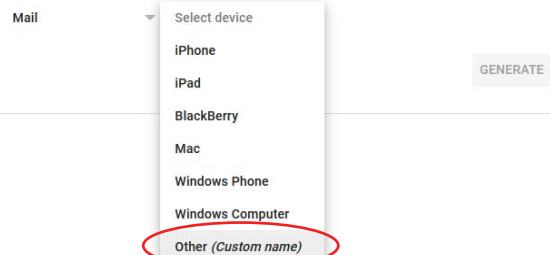

App passwords let you sign in to your Google Account from apps on devices that don't support 2-Step Verification. You'll only need to enter it once so you don't need to remember it. [Learn more](#)

You don't have any app passwords.

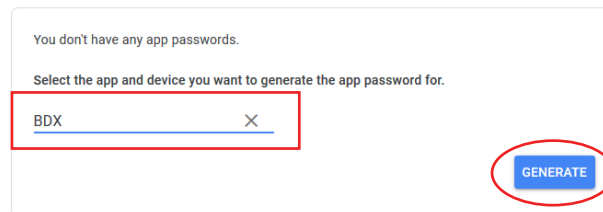

Select the app and device you want to generate the app password for.

6. Enter a name for reference, then click the "GENERATE" button to create the app password.
